NEW PRODUCT LAUNCH

Aidacare Full-Length Rails – Now Available!

Introducing the new full-length rails for FLX and FL250 beds, which are designed to prevent falls and help with patient repositioning.

When lowered, the timber-finished rails and end boards provide a seamless, attractive bed surround. The rails are easy to use and lower below the mattress height, allowing smooth and comfortable transfers in and out of bed.

We also offer a protector that provides padded support for users with these rails.

Bed Rail Protector Optional

PRODUCT FEATURES

- **Bed Mobility and Transfers:** the rails are easy to use and lower below the mattress height. This allows for smooth and comfortable entry and exit from the bed.

- **Safety and Fall Prevention:** The Full-Length Side Rails offer a secure solution to minimize fall risk for residents, without compromising on the ability to provide floor-level care.

- **Ease of Use:** The rails are easily adjustable with a simple press of a button, allowing caregivers to adapt quickly to the needs of each resident.

- **Durability:** Constructed from high-quality aluminium, these rails are built to withstand the demands of heavy use in aged care and long-term care settings.

- **Aesthetics:** When lowered, the timber-finished rails and end boards provide a seamless, attractive bed surround.

Functional Considerations:

- **Compatibility:** The Full-Length Rails are available in two versions. Standard and Long. This ensures full compatibility with FL250/FLX beds whether or not the bed extension is being used.

- **Choosing Bed Ends:** Rail-compatible bed ends are required to use full-length rails. These must be ordered and installed together with the rails. The relevant product codes can be found in the table on page 1.

- **Stock Ordering:** Simplified assembly codes have been established to streamline the selection process for customers, reducing the potential for errors.
