

# PRODUCT UPDATE

## Aidacare FLX Bed Design Update – Available Soon!

We have made some significant design and engineering changes to FLX beds to improve delivery safety and efficiency and enhance quality and durability.

### **Pull Apart - for Easier and Safer Delivery**

The FLX bed can now be separated into two sections (each weighing 58kg) making it safer and easier to deliver to environments with challenging access, such as stairs, tight corners, narrow corridors and doorways etc.

FLX beds will continue to arrive fully assembled and packaged in one piece but can now be disassembled and reassembled in under 15 minutes as required. Delivery risk assessments are still required and will be the basis for determining whether pull apart is necessary, case by case. Check out the assembly video here: [LINK](#)

### **Reengineered for Superior Quality and Durability**

FLX beds have also been reengineered to enhance quality and durability. Key components, welding specifications and critical pivot points have been upgraded, ensuring an even more durable bed that exceeds industry standards. Every bed is tested to the 275kg SWL before shipping! Plus, we have tested the design for life-cycle performance and it achieved more than double the typical market and standard requirements!

**Note:** This update is effective from order number PO01095116 which lands in Moorebank from early January 2025, and these models can be identified by serial numbers that include “PA.” Please clear older stock first.

### DISTRIBUTION INFORMATION

- Stock planning remains unchanged.
- Stock arrives from PO01095116 into NSW ING with more containers following to all distribution centres.
- Please contact Duc Nguyen if you require planning setting amendments.

### MARKETING AND PRICING
